Re: End-Of-Sale of the Vevo 3100 Imaging System

Dear Valued Customer,

FUJIFILM VisualSonics, Inc. (VSI) would like to thank you for being a longstanding customer. We are committed to providing the highest quality products and services to our customers, ultimately to empower ground-breaking research in the advancement of human health.

As of today, January 1, 2023, VSI will cease offering the Vevo 3100 Imaging System platform for sale. This change also affects the Vevo 3100 LT Imaging System. Service and support for the Vevo 3100 platform, its associated MX transducers, and other accessories will continue until December 31, 2027 (5 years total).

Available support includes:

- The option to purchase annual service contracts.
- Stocking of replacement parts where possible.
- Scientific applications support regarding the use of the technology in your research.

Moving forward, our latest platform, the Vevo F2 Imaging System, employs technological advances in a broad range of areas that help transcend many barriers. The Vevo F2 provides both ultra-high and low frequency ultrasound capabilities on the same system, expands available transducer architecture to include phased arrays, enables deep access to ultrasound channel data for acoustic research, and so much more. Connecting a Vevo LAZR-X to the F2 further expands the platform's capabilities by enabling photoacoustic imaging. Please contact your local VSI sales representative, or VSI directly, for further details.

As always, we appreciate your business and look forward to providing you with the best tools to assist you in attaining your research goals.

Regards,

Greg Nesbitt
Vice President, Global High Frequency
FUJIFILM VisualSonics, Inc.
